EDUCATION

Self-Directed Learning

The Odin Project

2024 - 2026

Full Stack Web Development

University

University of Buea

2019 - 2022

B.Tech in Mechanical Engineering

AWARDS & CERTIFICATIONS

- Advanced React — Meta, 2024
- Programming with JavaScript — Meta, 2023
- Version Control — Meta, 2024
- HTML and CSS in depth — Meta, 2024

SKILLS

- Express.js
- Node.js
- Prisma ORM
- PostgreSQL
- Back-end Authentication & Authorization
- REST API
- Embedded JavaScript (EJS)
- Multer
- Cloudinary
- CORS
- Critical thinking and problem-solving

PROFILE

Self-taught back-end developer transitioning from mechanical engineering into software development. I architect robust, secure database queries and APIs using Node.js, Express.js, and PostgreSQL, with expertise in authentication, authorization, and data consistency.

PROJECTS

Messaging App API - 2026

Node.js, Express, PostgreSQL, Prisma, Passport.js, JWT, Multer, Cloudinary, bcryptjs, express-validator

- Designed a RESTful messaging API with PostgreSQL and Prisma ORM, supporting direct and group messaging with efficient date-based filtering and recent message retrieval.
- Implemented JWT-based authentication and role-based authorization using Passport.js and bcryptjs, with admin-level group management.
- Built complex relational data models managing users, profiles, groups, messages, and files with Prisma transactions for data consistency.
- Integrated Multer and Cloudinary for file uploads (profile/group photos, image messages) with validation for file type and size limits.
- Designed modular route architecture with centralized error handling, CORS security, and input validation using express-validator.

Members Only - 2025

Node.js, Express, PostgreSQL, Passport.js, EJS, bcryptjs, express-validator, connect-pg-simple

- Implemented role-based access control (user, member, admin) with Passport.js Local Strategy, restricting message visibility and admin operations based on user status.
- Built persistent session management using PostgreSQL with connect-pg-simple for secure, scalable authentication.
- Engineered comprehensive input validation with express-validator, including email format, password strength, and async duplicate email detection.
- Secured password handling with bcryptjs hashing and implemented a membership system with secret code gate for user upgrades.
- Created admin-only features (database reset, message deletion) with authorization checks to prevent unauthorized operations.
