EDUCATION

Self-Directed Learning

The Odin Project

2024 - 2026

Full Stack Web Development

University

University of Buea

2019 - 2022

B.Tech in Mechanical Engineering

AWARDS & CERTIFICATIONS

- [Advanced React](#) — Meta, 2024
- [Programming with JavaScript](#) — Meta, 2023
- [Version Control](#) — Meta, 2024
- [HTML and CSS in depth](#) — Meta, 2024

SKILLS

- Express.js
- Node.js
- Prisma ORM
- Postgresql
- Back-end Authentication & Authorization
- REST API
- React.js
- Javascript
- HTML & CSS
- Critical thinking and problem-solving

PROFILE

Self-taught full-stack developer transitioning from mechanical engineering into software development. I build interactive front-end interfaces using HTML, CSS, JavaScript, and React.js, translating mockups into seamless user experiences. On the back-end, I architect robust database queries and APIs using Node.js, Express.js, and PostgreSQL to power dynamic applications.

PROJECTS

Odin-Book - 2026

React, Node.js, Express, PostgreSQL, Prisma, Passport.js, Javascript, HTML, CSS | [\[Frontend GitHub\]](#) | [\[Backend GitHub\]](#)

- [Built a RESTful API and decoupled React frontend](#), managing relational data for users, posts, and comments using PostgreSQL and Prisma ORM.
- [Secured the application](#) with JWT-based authentication via Passport.js, featuring seamless persistent login and automated guest profile provisioning.
- [Integrated third-party tools](#) to enhance functionality, utilizing Cloudinary for profile image storage and Faker.js to populate the database with realistic, interactive mock data.

Where is Waldo - 2026

React, Node.js, Express, PostgreSQL, Prisma, Javascript, HTML, CSS | [\[Frontend GitHub\]](#) | [\[Backend GitHub\]](#)

- [Developed a full-stack interactive photo-tagging application](#) with a decoupled architecture, building a dynamic frontend to handle user targeting and a backend API to process game logic.
- [Engineered secure backend coordinate validation](#) using a back-end object that contains the correct locations, and preventing client-side manipulation of the game.
- [Designed a precision scoring system](#) using Prisma ORM to track start/end times and generate real-time, ranked leaderboards for players.
- [Managed dynamic frontend state](#) to seamlessly transition users from gameplay to the results screen upon name submission.
